DUPONT™ TYCHEM® — PROTECTING INDUSTRIAL WORKERS FOR 30 YEARS

NOT ALL DEADLY THREATS COME IN THE FORM OF GUNS OR OTHER WEAPONS.

Whether the job is performing asbestos abatement, applying insulation, or handling industrial chemicals, DuPont understands the risks. That's why we've developed chemical protective clothing engineered from Tyvek® and Tychem®. They're made to help reduce worker chemical exposure while performing their jobs. Plus, we rigorously test all our Tyvek® and Tychem® fabrics to eliminate "what ifs." And we continue to innovate by bringing cutting-edge solutions like SafeSPEC™ 2.0, an online tool that helps safety managers make the best decisions for selecting apparel. It's just another way we're helping hazardous work become less hazardous to the worker.
