

Tried Tyvek® 400 during Covid and have continued using it since!

“Tyvek® 400 is highly reliable and a very good quality product.”

Dr. Jayashree Todkar, Todkar Hospital, Pune

Synopsis

- My entire family and my staff’s family were very worried during Covid.
- They were assured that we are safe with Tyvek® 400 PPE.

Challenges

We are a 20-bed hospital in existence since the last 46 years. I have been performing my duties as a doctor for the last 25 years and using PPE for more than 20 years as and when necessary to keep a sterile environment. We have over 30 employees in the hospital, and during Covid, there was a general panic among families of healthcare workers.

The pandemic period was highly stressful due to the infectious nature of the virus. The concerns and worries of family members were completely valid and we chose the PPE which has been there for years!

Solutions

Due to the nature of the pandemic, it was imperative that healthcare workers are protected at all costs. After all, frontline workers are essential to handle the patients and if they come into contact with the virus, it will be harmful to everyone we come in contact with. During Covid, we choose Tyvek® 400 as it has been trusted globally for many decades. It is tried and tested in labs as well as in real-life epidemics around the world. It is renowned in the medical fraternity to provide highly reliable protection and maintaining a sterile environment. After using it personally, I realized that Tyvek® 400 is made from very good quality material that provides an impenetrable barrier. It is definitely better than locally made PPE overalls. Since our families were highly concerned with our safety and protection during the pandemic, it was essential for us to take care of ourselves and even keep them safe when we went home. They were assured when we choose a global standard product in the form of Tyvek® 400 for our entire staff.
